
WetterOnline API

Release 0.1

Johan Gröger

May 22, 2023

CONTENTS

1	Contents	3
1.1	Installation	3
1.2	Quickstart	3
1.3	Usage	4

wetteronline is a Python library which provides unofficial access to the weatherdata hosted on [wetteronline.de](#). It uses webscraping and (hopefully) offers a *simple* and *intuitive* API.

Note: This project is under active development. (And so is the documentation too!) Choose carefully, whether you want to write code dependent of this package, functions and attributes might change at any time.

CHAPTER
ONE

CONTENTS

1.1 Installation

First things first, installing the package.

1.1.1 pip

You can install the WetterOnline API via pip in a terminal of your choice:

```
$ pip install wetteronline
```

1.1.2 source code

Alternatively the source code is available on Github [here](#). You can clone the repository:

```
$ git clone https://github.com/johangroe/wetteronline-api.git
```

1.2 Quickstart

Ready to get started?

1.2.1 Basic usage

```
>> import wetteronline
>> l = wetteronline.location("New York")
>> l.url
"wetter/new-york-city"
>> w = wetteronline.weather("wetter/new-york-city")
>> w.temperature
18 # °C
```

1.2.2 Advanced usage

```
>> import wetteronline
>> l = wetteronline.location("New York")
>> l.autosuggests
['New York', 'New York Mills, New York', 'New York, Missouri', 'New York Mills, Minnesota']
>> w = wetteronline.weather(l.url)
>> w.forecast_4d
{'19.06.': {
    'maxTemperature': 24,
    'minTemperature': 13,
    'sunHours': 13,
    'precipitationProbability': 10
},
'20.06.': {
    'maxTemperature': 27,
    'minTemperature': 13,
    'sunHours': 13,
    'precipitationProbability': 5
},
'21.06.': {
    'maxTemperature': 25,
    'minTemperature': 15,
    'sunHours': 3,
    'precipitationProbability': 80
},
'22.06.': {
    'maxTemperature': 27,
    'minTemperature': 18,
    'sunHours': 8,
    'precipitationProbability': 50
}
}
```

1.3 Usage
